Sabiana take part to the Eurovent program of fan coil performance certification. The official figures are published in the web site

v.eurovent-certification.com and in the web site www.certiflash.com. The tested performances are:

- Cooling total emission at the following conditions: Water temperature +7°C E.W.T. Entering air temperature
 - +27°C dry bulb
 - +19°C wet bulb

+12°C L.W.T.

- Heating emission (2 pipe units) at the following conditions: Entering water temperature +50°C Entering air temperature +20°C

 - Water flow rate as for the cooling conditions

• Fan absorption

- Cooling sensible emission at the following conditions:
 Water temperature +7°C E.W.T. +1
 - Water temperature
 - Entering air temperature
- +12°C L.W.T. +27°C dry bulb +19°C wet bulb
- Heating emission (4 pipe units) at the following conditions: Water temperatureEntering air temperature +70°C E.W.T. +20°C +60°C L.W.T.
- Water pressure drop

• Sound power

Innovating and beautiful design, seven different sizes, high control flexibility, easy maintenance: the new SkyStar chilled water cassette is the result of an extended technical and design development aimed at achieving the highest level in terms of performance, silent operation and control possibilities.

The air diffuser has an highly attractive aesthetical appearance, very innovative, and is also able to offer the best air distribution performance thanks to long computer studies and laboratory tests. The standard colour is RAL 9003, other colours available on request.

The 4 smaller sizes are designed to fit into 600x600 mm false ceiling standard modules. The 3 bigger sizes have a dimension of 800x800 mm which allows the best outcome in terms of quietness and of price/performance ratio for these high capacity models.

Every unit can be supplied with 1 battery (2 pipe system) and a possible electric heater or with 2 batteries (4 pipe system). Each model can have fresh air intake and a remote air diffuser can be connected to the unit.

The condensate pump is integral with the unit, is very quiet and has a maximum head of 650 mm.

In addition to the temperature and speed standard controls, automatic speed selection is also available. More than one unit can be connected to a single control, and the unit control panel can be installed in a position that facilitates the maintenance operation. Every unit can also be operated by the means of an infra-red remote control. The SkyStar cassettes can also be connected to the most common automatic building management systems.

It is also possible to use a completely wireless electronic control system based on radio communication called Free Sabiana, with great advantages in terms of installation flexibility and maximum precision in measuring room temperature.

Finally, each unit can be equipped with a low energy consumption electric motor that is controlled by an inverter card that makes possible continuous air flow variations.

SkyStar SABIANA

INTAKE GRID AND DISTRIBUTION OF THE AIR

Intake grids, frame and adjustable air distribution louvers on each side, made from ABS.

- HTA version : white ABS, RAL 9003
- HTB version : with intake grid, frame and louvers, choice of one colour only
- *HTC version* : with intake grid and louvers, choice of one colour, plus white ABS frame RAL 9003
- *HTD version* : with louvers, choice of one colour, while the grid and frame are made from ABS, RAL 9003
- *MD-600 version* : metal diffuser painted in RAL 9003 white colour with 600x600 dimension to perfectly fit into the false ceiling standard modules without overlapping parts (800x800 model is not available).

CASING

Is made from galvanized steel with inside thermal insulation with polyolefin (PO) foam (class M1) and outside anti-condensate lining.

CONTROL PANEL

Made of an external box with the control electronic board with an easily accessible terminal board.

FAN ASSEMBLY

The fan assembly, which is mounted on anti-vibrating supports, is extremely silent.

The radial fan has been designed to optimise performance, using wing profile blades with a shape that reduce turbulence, increasing efficiency and reducing noise.

The single air inlet radial fan is connected to a 6 speed electric motor with single phase 230V/50Hz supply, class B insulation and integrated Klixon thermal contact for motor protection.

The units are supplied with 3 standard speeds connected and it is possible to change them on site if necessary.

HEAT EXCHANGER

Made of copper tubes with bonded aluminium fins for maximum transfer contact.

The batteries are with 1, 2 or 3 rows for 2 pipe models and 2+1 rows for 4 pipe models (the heating row is on the inside part of the battery).

For 4 pipe systems two versions are available:

SK 04, SK 14, SK 24, SK 34, SK 44, SK 54, SK 64 supply an higher heating emission;

SK 26, SK 36, SK 56, SK 66 supply an higher cooling emission.

The heat exchanger is not suitable for use in corrosive atmosphere or in environments where aluminium may be subject to corrosion.

CONDENSATE COLLECTION TRAY

High density ABS polystyrene foam condensate tray, shaped in order to optimize the air diffusion, fire retardant rating B1 to DIN 4102.

AIR FILTER

Synthetic washable filter, easily removable.

CONDENSATE PUMP

Float switch centrifugal pump with 650 mm of maximum head, integral to the unit and wired to the control panel on the outside of the casing.

VALVE SET

Two or three way valves for ON/OFF operation, with pipe mounting kit and thermostatic actuator.

EUROVENT Certification

Technical features

www.eurovent-certification.com www.certiflash.com

2 pipe units. The following standard rating conditions are used:

COOLING

Entering air temperature: $+ 27^{\circ}C \text{ d.b.}$, $+ 19^{\circ}C \text{ w.b.}$ Water temperature: $+ 7/12^{\circ}C$

HEATING

Entering air temperature: + 20°C Water temperature: + 50°C water flow rate as for the cooling conditions

The air throw indicated in the tables must only be considered the maximum value, as it may change significantly in relation to the dimensions of the room in which the appliance is installed and the positioning of the furniture in the room.

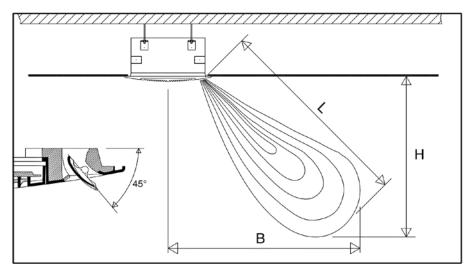

The useful throw **L** refers to the distance between the unit and the point where the air speed is 0.2 m/sec; if the louver has a gradient of 30° (recommended in cooling mode), the so-called "Coanda" effect will occur, illustrated in the first figure, while at a gradient of 45° (recommended in heating mode), there will be a downwards throw, as illustrated in the second figure.

With adjustable air diffusion louvers at 30°

Model			SK 02-04-12-14		SK 22-24-26		SK 32-34-36		SK 42-44		SK 52-54-56			SK 62-64-66

Distance	В	m	2,5	2,9	3,1	2,5	3,1	3,6	2,9	3,4	3,9	2,7	3,2	3,8	3,0	3,6	4,2	3,0	4,0	4,6

NOTE:

On heating it must be payed attention to rooms where the floor temperature is particularly low (for example less than 5° C).

In this situation the floor can cool the lower layer of air to a level that stop the uniform diffusion of the hot air coming from the unit, decreasing the throw figures shown in the table.

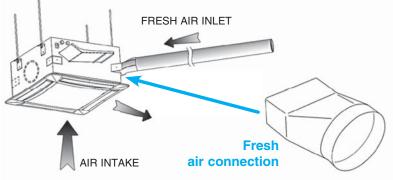

Fresh air supply - Fresh air connection

SkyStar SABIANA

The cassette is fitted with inlets for fresh air to be mixed with return air inside the unit (Fig. 3).

The fresh air flow is limited to 20% of the total fan coil air flow at medium speed and 100 m³/h for each treated air inlet.

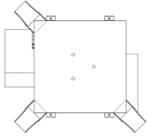

The units feature fresh air inlets on three corners (no inlets on the fourth corner because of the condensate pump inside the unit).

The fresh air inlets are designed for the insertion of standard 110 x 55 mm rectangular ducts.

The air duct is connected quickly and easily. After removing the blank and the insulation inside the unit, the mounting plate is rolled back and the air duct with its V-shaped section must be pushed into the unit (see Figures below). The duct is then fixed to the mounting plate.

MAIN AIR INLET r 🖗 105

Note: the fresh air must be filtered.

Accessory "Fresh air connection" - Identification CAP - Code 6078005 (see page 14)

Air distribution - Air distribution connection

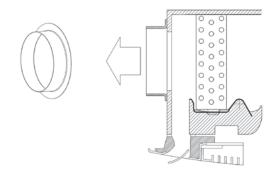

Two air outlets are provided on the side of the unit for connection to separate supply air outlets.

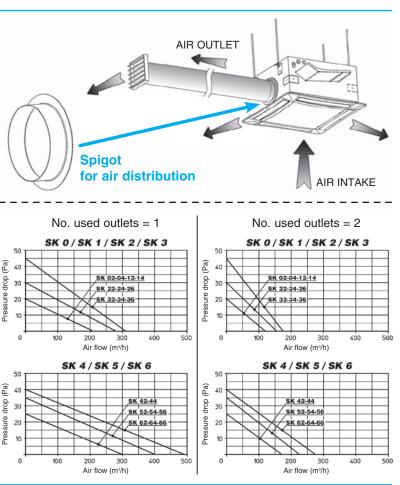

They can be used to supply air from the fan coil unit to distant areas of a room or even to a different room.

The total air flow does not change.

The air flow at high speed depending on the air duct pressure drop is shown in the tables below.

Note: all air ducts must be insulated in order to avoid condensation.

240	36	500	36

air flow of fresh air introduced into the environment depend on the inlet static pressure.

The diameter of the fitting is 150 mm for SK 0 - 1 - 2 - 3 and 180 mm for SK 4 - 5 - 6.

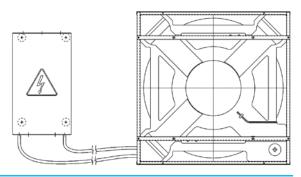

Units with remote electric board

On request the Skystar cassettes are available with electric control panel reachable from below and with the electric board that can be placed in a remote position. In this case the units are supplied with an electronic connecting control panel, fitted to the bottom side on the 4 smallest sizes and to the lateral side on the 3 biggest sizes.

The electronic control panel is connected to the fan motor, to the condensate pump and to the condensate level control.

A 6 m wire is also supplied with integral plug-in connections to connect the unit with the remote electric board that can be installed in a suitable and comfortable position, where the power and system connections can be made easily.

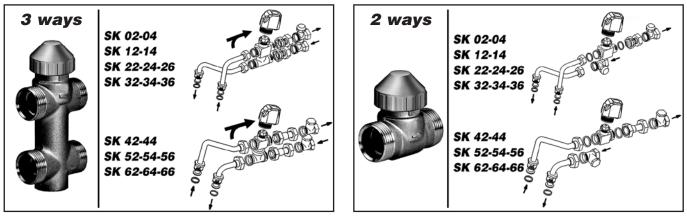

This feature is not available for units with electric heater or infrared remote control.

* maximum pressure difference for valve to close ** external thread, flat seal **Note:** 3 way valves with simplified kit and 1" connection have conical seal.

Valve set, 2 or 3 ways, ON-OFF, with thermoelectric actuator. The set includes connection pipes.

Note: The main battery lockshield valve connection is 1/2" female (Kvs 2) for SK0 - SK1 - SK2 - SK3 sizes and 3/4" female (Kvs 3,5) for SK4 - SK5 - SK6 sizes, the auxiliary battery valve connection is 1/2" female (Kvs 2).

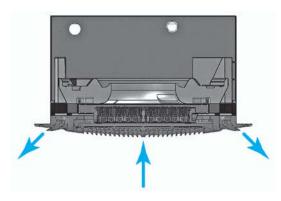

Note: The maximum pressure drop accross the fully open valve should not exceed 25 kPa for cooling operation and 15 kPa for heating operation.

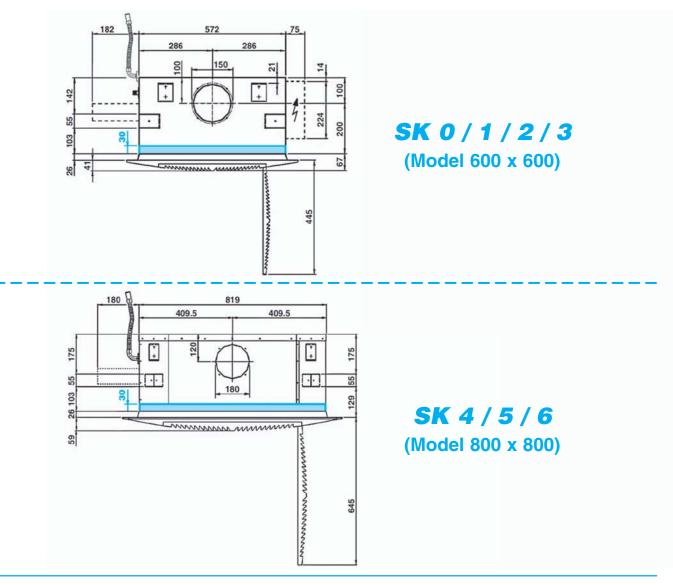

Introduction

Cassette SkyStar can be equipped with the innovative plate type electrostatic filter, **Crystall**, combining air treatment and purifying in a single product. The electronic filter is patented and certified according to Standard UNI 11254.

SkyStar SABIANA

OUTLET

INLET OF POLLUTED AIR of the big

OF CLEAN AIR

HASE

2

PHASE

1

Air without

Electrostatic

Air without

particles ≥ 50 µm Pre-filter

filter

particles < 1 µm

Operating principle of the electrostatic filter

When the polluted air goes through the mechanical pre-filter the particles \ge 50 μ are eliminated (powder, insects, etc).

Then the smallest particles (50 \div 0.01 µm) are exposed to an intensive ionizing field and are polarized (*Phase 1*).

The charged particles passing through the second filter section, are pushed back by the anode and attracted to the collection surfaces by a strong, induced magnetic field (*Phase 2*).

The air which leaves the unit is free from polluting particles.

Indoor air quality (IAQ)

The expression Indoor Air Quality (IAQ) covers all the procedures and methodologies used to improve the quality of the air we breathe in the places where we live and work, from all points of view, from temperature to cleanliness, to relative humidity, etc. (EN 15251 and EN 13779). Thanks to its new patented electronic filter, the **Crystall** electrostatic filter totally eliminates the pollutants present in the air, including tobacco smoke, dust (PM10, PM2.5), fibres, microbiological substances such as bacteria, fungi, etc., which are harmful to human health (source: OMS 2009). Purifying the air means not only greater well-being, but also energy saving, as the fresh air changes that are required to restore ideal climatic conditions and that entail greater consumption, are significantly reduced (it is sufficient to enter the quantity of air required to restore the optimum level of CO₂ - source: EN 1379:2008). Moreover, according to the UNI 10339rev, air recirculated by the **Crystall** appliance can be considered as fresh air, to be added to the minimum requirements (0,5 ls/m2). Purifying the air with the Sabiana **Crystall** appliance also entails no reduction of living room space, as the dimensions of the fan convector are practically unchanged (just 3 cm higher). The positioning of the electronic filter allows simple and effective maintenance and, as it is easy to wash, its working life is practically unlimited. The modularity of the filter components and their ease of mounting make the system extremely competitive in terms of cost compared with other types of filters present on the market. In spring and autumn, if air conditioning/heating is not required, the appliance acts simply as an air purifier.

Standards and legislation

THE AMBIENT CONDITION IS ACCEPTABLE WHEN:

- Microclimatic parameters are normal
- 80% of people are satisfied by the quality of air
- Specific internal contaminants are not in harmful concentrations

"Guidelines for the protection and promotion of health in confined areas O.G. No. 276 dated 27 Nov 01 ordinary supplement no. 252"

The method for obtaining the air quality required in confined areas and thus succeeding in ensuring that the contaminants present are in concentrations less than those considered dangerous to health are:

Prescriptive approach: ventilation of the internal area using only properly filtered fresh air, in the quantity and quality needed to dilute the internal contaminants in order to reach the required maximum acceptable concentration values (see WHO limits).

Performance approach: ventilation with fresh air and recirculated air from the same area, both properly filtered, in the quantity and quality needed to dilute the internal contaminants in order to reach the required maximum acceptable concentration values (see WHO limits).

Crystall

The quantity and quality of recirculated air and outdoor air to be added is better specified in the prescriptive and performance approach in Standards UNI EN 13779:2008 and soon to be released UNI 10339rev according to the following simplified tables.

	UNI EN 13779:2008				
	CATEGORY	Unit	RATE OF FRESH AIR

Fresh air flow rates according to the performance approach

UNI EN 13779:2008 and UNI 10339rev Standards

The example reproduced at the bottom of the page shows how, with adequate air filtering, it is possible to decrease considerably the quantity of fresh air to be brought into the environment (up to 3-4 times less); the thermal energy dissipated due to ventilation is in fact in direct proportion to the number of air changes, as indicated in the following equation:

$$\mathbf{Qv} = \Delta \mathbf{T} \cdot \frac{\mathbf{R}}{3600} \cdot \mathbf{D} \cdot \mathbf{C} \cdot \mathbf{Vol}.$$

Qv	= Thermal energy lost for ventilation	- Watt
ΔT	= Indoor-Outdoor difference (T)	- °C
R	= A.C.H.	
D	= Air density	- Kg/m³
С	 Specific air heat 	- J/Kg-°C
Vol	= Room size	- m ³

Construction features

The **Crystall** electrostatic filtering system consists of two parts: the first is a **plate type electronic active filter** and is fitted in the return air section of the cassette, while the second is an **electronic control and regulation board**, fixed on the structure.

All electrical connections are made during production. The installation of the SkyStar Sabiana cassette fan coil unit incorporating the **Crystall** electronic filter is therefore similar to that of a normal unit: the only difference is the installation height, for which the filter dimensions must taken into account.

Crystall filters are not suitable for ECM and electric heater versions.

Active plate type electronic filter

The filtering element consists of two sections: the first consists of electrodes and insulating elements, forming a self-supporting ionising frame, while the second consists of special light aluminium fins (collector).

The two sections are installed above the return air grille to make the extraction and maintenance of the filter easier.

Accessibility to sections to be cleaned is ensured by easy-open plastic closures.

The collector can be cleaned by washing with water and ordinary detergents or steam jets (please consult the maintenance manual for further details).

Electronic board

Controls and regulates all functions of the electrostatic filter.

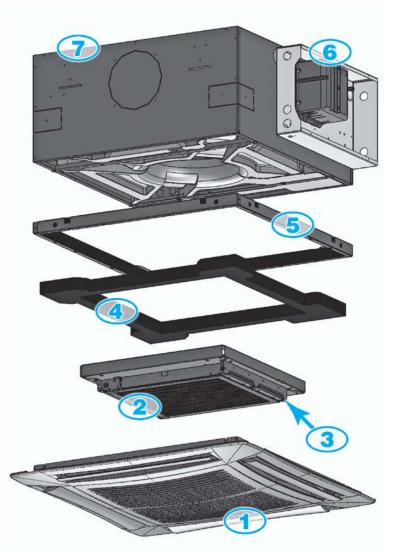

It is appropriately protected against any operating defects of the electrostatic filter. It supplies a constant voltage to the electrodes when the mains supply voltage varies (\pm 15%).

The supply transformer is constructed with its primary and secondary coils physically separated and wound onto separate cores.

The energy consumption of the filter group is 25 W (to which the electrical consumption of the Cassette must be added).

Control and regulation commands

Units with **Crystall** electrostatic filter can be controlled and regulated by the series of **IAQ** controls that are already provided for CRC Carisma fan coils.

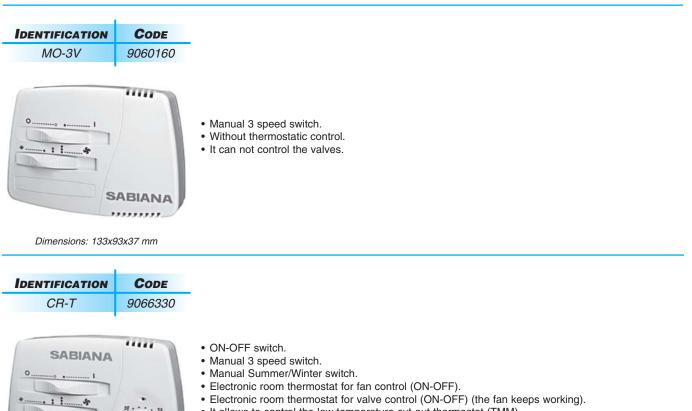

- Diffuser with return air grid
- 2 Active plate type electrostatic filter
- 3 Plastic opening
- 4 Insulation
- 5 Filter containment frame
- 6 Electronic board
- 7 Cassette

If using the Skystar Cassette fan coils with electronic controllers, the voltage values at the autotransformer terminals must be kept in consideration (transformer return voltages). These values may reach 500 Vac.

- It allows to control the low temperature cut-out thermostat (TMM).
- It allows to control the chilled water valve (ON-OFF) and the electric heater in the SK-E version.

FreeSabiana

Free Sabiana is an innovative, **fully wireless**, electronic system for use with fan coil units, based on radio communication.

This technology **provides installation flexibility and a more accurate measurement of the room temperature.** The probe can be moved until the most suitable position is found, without the worry of changes in the environment layout and of its furniture and also without mounting it on a wall. If a new fan coil unit is added, no electrical wiring for the control system is

required: just define the control unit and the probe which regulates it. The improved measurement accuracy derives from the possibility to position the probe near the typical location of the user: this enables to keep the temperature exactly at the required value with more energy savings compared with a traditional measurement system.

Transmission is based on communication protocol IEE802.15.4, the most suitable way to transmit a relatively low amount of information with very low consumption and high reliability.

The system has been certified by a leading independent body, officially recognized by the EU authorities and its sale has been authorized in all the EU and EFTA countries.

Main components

Free Sabiana includes 3 main components:

A remote control which features a button panel and LCD display and can be wall mounted or positioned on a dedicated table support.

It enables the control of all the operating variables of the fan coil units in different configurations. The control is battery powered.

The temperature and the operating speed of the fan coil unit are set with two large buttons featuring user friendly graphics.

• A **power unit** to be installed on the fan coil (fan coil interface).

It controls the fan and the valves of the fan coil. The power unit is connected to the electric supply.

The power unit receives the information required to control the fan coil both from the remote control and locally, such as the temperature of the coil.

A room temperature probe, which can be wall mounted or positioned on a dedicated table support. It is a battery powered device, able to measure the air temperature in the spot where it is positioned, generating temperature information which is communicated to the other devices.

FreeSabiana wireless control system

SkyStar **SABIANA**

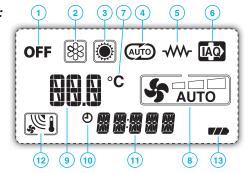

Main features of the remote control

The control enables:

- Fan coil on/off switching
- Fan speed selection (high medium low automatic)
- Summer/winter operation selection
- Valve on/off
- Real time clock setting
- Temperature setting
- Daily switch on/off setting (timer function)
- O Enable/disable the timer function
- Activation of the (eventual) electrostatic filter
- Activation of the (eventual) electric heater

Main information displayed:

- 1 On-off status
- Summer operation
- 3 Winter operation
- 4 Automatic season change
- 5 Electric heater
- 6 Crystall filter
- Room temperature (with decimal accuracy)

- 8 Fan operating speed
- 9 Required/measured temperature
- 10 Timer
- 1 Clock
- 12 Transmission signal
- 13 Battery level

Main features of the power unit to be installed on the fan coil

The power unit controls

the fan and the valves of the fan coil. The power unit receives the information required to control such units both from the remote control and locally.

It enables the following main actions:

- Fan on/off at a set speed
- Fan speed change (fan on/off)
- O Water valve/s on/off (1 valve for 2 tube system 2 valves for 4 tube system)
- Fan speed change operating the water valve/s
- O Control of the electric heater as main heating unit or as integration to the battery supplied with hot water
- O Control of the operation of the electrostatic filter (in parallel to the fan)
- Management of the dead zone function for 4-tube systems
- O Available functional inputs: Consent for remote on/off
 - Consent for remote Summer/Winter switch (centralized)
 - Consent for the activation of the Energy Saving function with setting change
 - Minimum probe
 - Probe for season change

Main features of the temperature probe

This device is able to measure the temperature of the air in the spot where it is positioned and to transmit it by means of radio communication to the other devices in the system. It is battery powered and can be freely positioned in the area to be air-conditioned.

Display:

- O Measured environment temperature
- Transmission signal
- O Clock
- Battery status

Controls for SK-MB versions

All the *SkyStar* units can be supplied in *MB version*. This version includes a wide range of controls, including the **infra-red remote control**, which allows managing one single unit or several units by using the <u>Modbus RTU - RS 485</u> communication protocol.

Units can be managed according to the Master/Slave logic (up to 20 units) or by supervisory components.

The system consists in a **MB** board (mounted on models SK–MB and SK–ECM–MB) and a series of controls, such as the **T-MB** wall control, the **RT03** infra-red remote control, the **PSM-DI** multifunction control and the **Sabianet** supervisory program.

Sabianet software

All the controls for the **ECM** version and their functions are described in detail from Page 43.

The SkyStar 2 pipe models are available with electric heater that is controlled in place of the heating battery valve. The electric heater is controlled in place of the hot water valve and not as integration to it.

The heater is hermetically sealed and supplied inside the battery pipes and therefore can be only factory mounted. The electric heaters of the SK 12-22-32 units are for single phase 230V supply.

The electric heaters of the SK 42-52-62 units are for three phase 400V supply.

A specific electronic board is fitted in the unit control panel and it is connected to the heater and to the safety thermostat.

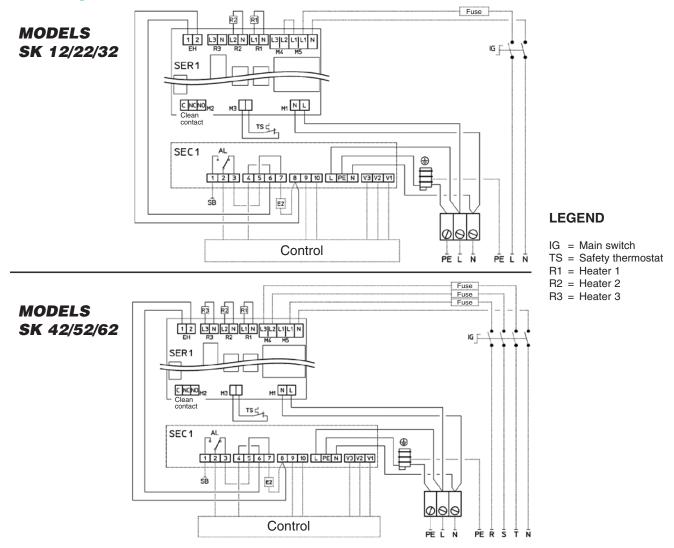

When the safety thermostat operates, it keeps open the heater supply relays on the electronic board.

The rearmement is by electric means, cutting off the supply to the unit.

SkyStar ECM ECM

Introduction

The SkyStar ECM series uses an innovative brushless synchronous permanent magnet electric motor controlled by an inverter card that is directly installed on the unit.

The air flow can be varied **continuously** with a 1-10 V signal from Sabiana controls or by independent contollers (programmable controllers with a 1-10 V output).

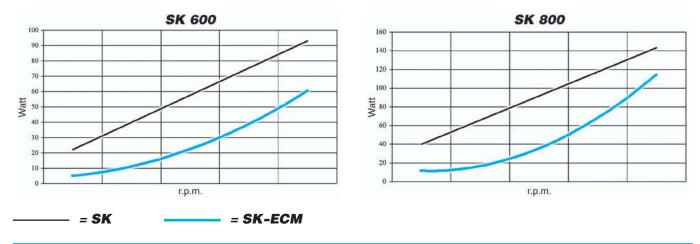

The extreme efficiency, also at a low speed, makes possible a great reduction in electric consumption (more than 75% less in comparison to a traditional motor) with absorption values, under normal operating conditions, that are no greater than 10 Watt in the entire range.

The brushless motor is characterised by a constant synchronous speed, independently of the applied load, that depends only on the motor power supply frequency, which is modulated by the inverter. It consumes less because:

- The motor always works at its point of maximum efficiency.
- In the brushless motor, the rotor's permanent magnets generate the magnetising power autonomously.
- The motor always operates at the synchronous speed, as a result there are no induced currents that reduce efficiency.

The main advantages are:

- Large reduction in energy consumption, thanks to an optimal response to the thermal load of the environment during every moment of the day.
- Operating silence at all rotation speeds.
- Ability to operate at any rotation speed.

MOTOR ABSORPTION

Main components

INTAKE GRID AND DISTRIBUTION OF THE AIR

Intake grids, frame and adjustable air distribution louvers on each side, made from ABS.

HTA version : white ABS, RAL 9003

- *HTB version* : with intake grid, frame and louvers, choice of one colour only
- *HTC version* : with intake grid and louvers, choice of one colour, plus white ABS frame RAL 9003
- *HTD version* : with louvers, choice of one colour, while the grid and frame are made from ABS, RAL 9003
- *MD-600 version* : metal diffuser painted in RAL 9003 white colour with 600x600 dimension to perfectly fit into the false ceiling standard modules without overlapping parts (800x800 model is not available).

CASING

Is made from galvanized steel with inside thermal insulation with polyolefin (PO) foam (class M1) and outside anti-condensate lining.

CONTROL EQUIPMENT

SK–ECM version

It consists of the pump control circuit board and the inverter circuit board.

SK-ECM-MB version

It consists of the MB electronic board (that integrates pump control) and the inverter board.

FAN ASSEMBLY

The fan assembly, which is mounted on anti-vibrating supports, is extremely silent.

The radial fan has been designed to optimise performance, using wing profile blades with a shape that reduce turbulence, increasing efficiency and reducing noise.

The fans are connected to a three phase permanent magnet brushless electronic motor that is controlled with reconstructed current according to a BLAC sinusoidal wave.

The inverter board that controls the motor operation is powered by 230 Volt, single-phase and, with a switching system, it generates a three-phase frequency modulated, wave form power supply.

The electric power supply required for the machine is therefore single-phase with voltage of 230 - 240 V and frequency of 50 - 60 Hz.

HEAT EXCHANGER

Made of copper tubes with bonded aluminium fins for maximum transfer contact.

The batteries are with 2 or 3 rows for 2 pipe models and 2+1 rows for 4 pipe models (the heating row is on the inside part of the battery).

For 4 pipe systems two versions are available:

SK 14 and SK 44 supply an higher heating emission;

SK 26, SK 36, SK 56 supply an higher cooling emission.

The heat exchanger is not suitable for use in corrosive atmosphere or in environments where aluminium may be subject to corrosion.

CONDENSATE COLLECTION TRAY

High density ABS polystyrene foam condensate tray, shaped in order to optimize the air diffusion, fire retardant rating B1 to DIN 4102.

AIR FILTER

Synthetic washable filter, easily removable.

CONDENSATE PUMP

Float switch centrifugal pump with 650 mm of maximum head, integral to the unit and wired to the control panel on the outside of the casing.

VALVE SET

Two or three way valves for ON/OFF operation, with pipe mounting kit and thermostatic actuator.

Technical features

2 pipe units. The following standard rating conditions are used:

Air throw

The air throw indicated in the tables must only be considered the maximum value, as it may change significantly in relation to the dimensions of the room in which the appliance is installed and the positioning of the furniture in the room.

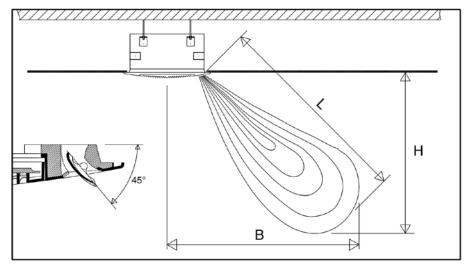

The useful throw **L** refers to the distance between the unit and the point where the air speed is 0.2 m/sec; if the louver has a gradient of 30° (recommended in cooling mode), the so-called "Coanda" effect will occur, illustrated in the first figure, while at a gradient of 45° (recommended in heating mode), there will be a downwards throw, as illustrated in the second figure.

NOTE: On heating it must be payed attention to rooms where the floor temperature is particularly low (for example less than 5°C). In this situation the floor can cool the lower layer of air to a level that stop

In this situation the floor can cool the lower layer of air to a level that stop the uniform diffusion of the hot air coming from the unit, decreasing the throw figures shown in the table.

Fresh air kit

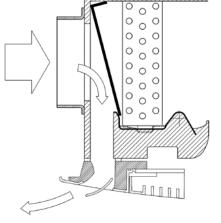

This is used to introduce primary air into the environment directly through the diffuser. The kit includes a flow separator to be fitted inside the cassette, and a circular fitting for connection to the flexible system ducting. The flow of air is sent directly to just one of the outlet louvers, without passing through the coil. The

dop and solution water flow (l/h)

* maximum pressure difference for valve to close
 ** external thread, flat seal
 Note: 3 way valves with simplified kit and 1" connection have conical seal.

Valve set, 2 or 3 ways, ON-OFF, with thermoelectric actuator. The set includes connection pipes.

- Note: The main battery lockshield valve connection is 1/2" female (Kvs 2) for SK1 - SK2 - SK3 sizes and 3/4" female (Kvs 3,5) for SK4 - SK5 sizes, the auxiliary battery valve connection is 1/2" female (Kvs 2).
- Note: The maximum pressure drop accross the fully open valve should not exceed 25 kPa for cooling operation and 15 kPa for heating operation.

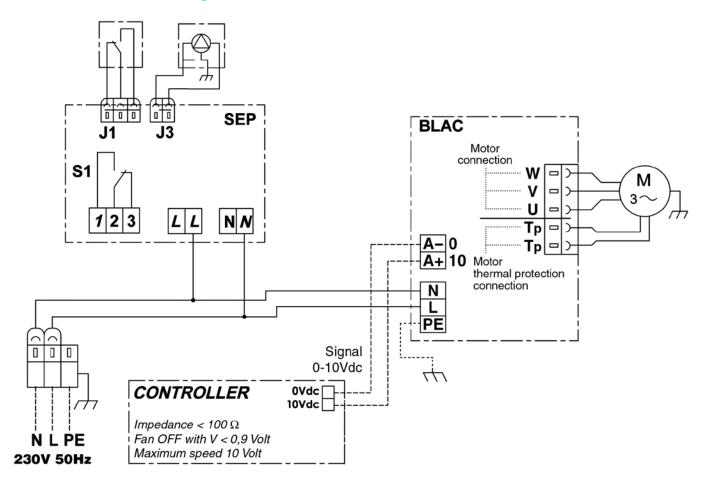

SK-ECM configuration

For this cassette configuration, the 1-10 Vdc signal, which controls the inverter, must be supplied by a controller with the following signal specifications:

- Impedance < 100 Ω ;
- Maximum speed 10Vdc;
- Fan OFF with V < 0.9Vdc.

Controls for **SK-ECM-MB** versions

All the *SkyStar ECM* units can be supplied in *MB version*. This version includes a wide range of controls, including the **infra-red remote control**, which allows managing one single unit or several units by using the <u>Modbus RTU - RS 485</u> communication protocol.

Units can be managed according to the Master/Slave logic (up to 20 units) or by supervisory components.

The system consists in a **MB** board (mounted on models SK–MB and SK–ECM–MB) and a series of controls, such as the **T-MB** wall control, the **RT03** infra-red remote control, the **PSM-DI** multifunction control and the **Sabianet** supervisory program.

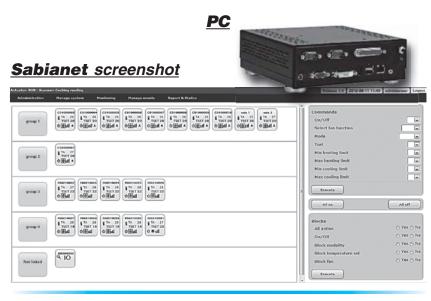

T-MB wall control

PSM-DI multifunction control

RT03 infra-red remote control

Sabianet software

SkyStar SABIANA

MB controls

MB electronic board

The **MB** electronic board, mounted as per standard on the SK–MB and SK–ECM–MB versions, is set to carry out different functions and adjustment modes, in order to meet the installation requirements.

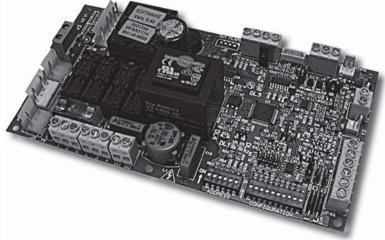

These modes are selected by setting the configuration dip switches on the board.

- 2/4 pipe system.
- Fan ON/OFF thermostatic control.
- Valve ON/OFF thermostatic control and continuous ventilation.
- Valve and simultaneous ventilation ON/OFF thermostatic control.
- Fan operation control depending on the coil temperature (cut-out T3 probe fitted), which can be activated only in heating mode or heating and cooling mode.
- Automatic switch of the operating mode by means of T2 water probe (optional) applied on the 2 pipe system.
- Seasonal switch by means of remote contact.
- ON/OFF of the fan coil by means of the remote contact (window or clock contact).
- Electric heater control.

By activating the cut-out T3 probe function, the fan is stopped in winter when the coil temperature is lower than 32°C and started when the temperature reaches 36°C. In summer mode, the fan stops when the temperature inside the coil exceeds 22°C and starts when it drops below 18°C.

The following connections are located on the power board:

- Receiver for infra-red remote control.
- T-MB wall control.
- RS 485 serial connection to manage several fan coils in Master/Slave configuration or to create a supervisory network.

T-MB wall control

DESCRIPTION	I DENTIFICATION	Code
Wall control (to be used with SK-MB and SK-ECM-MB version only)	T-MB	9066331E

Wall control with display that allows controlling one or more units in Master/Slave mode. The control is equipped with internal sensor to detect the room temperature, which can be defined as a priority compared to the return air sensor on the fan coil.

The **T-MB** control features the following functions:

- Switch the appliance ON and OFF.
- Temperature set.
- Modify the set point (when used as a +/- 3° variation of the set point configured from Sabianet supervisory program).
- Set the fan speed (low, medium, high or autofan).
- Set the operation mode (fan only, cooling, heating; auto for 4 pipe systems with mode selection depending on the air temperature).
- Time setting.
- Weekly ON/OFF program.
- Display and change of the fan coil operation parameters.

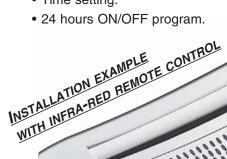

RT03 infra-red remote control

Description	I DENTIFICATION	Code
RT03 infra-red remote control with receiver supplied with separate packaging (to be used with SK–MB and SK–ECM–MB version only)	RCS-RT03	9079117
Receiver for RT03 infra-red remote control supplied with separate packaging (to be used with SK–MB and SK–ECM–MB version only)	RCS	9079116
Receiver for RT03 infra-red remote control and MD-600 metal diffuser supplied with separate packaging (to be used with SK–MB and SK–ECM–MB version only)	RS	9066338
RT03 infra-red remote control supplied with separate packaging (to be used with SK–MB and SK–ECM–MB version only)	RT03	3021203

The infra-red remote control allows setting by a remote position the fan coil operation parameters.

The **RT03** infra-red remote control features the following functions:

- Switch the appliance ON and OFF.
- Temperature set.
- Set the fan speed (low, medium, high or autofan).
- Set the operation mode (fan only, cooling, heating; auto for 4 pipe systems with mode selection depending on the air temperature).
- Time setting.

IDENTIFICATION CODE RT03 3021203

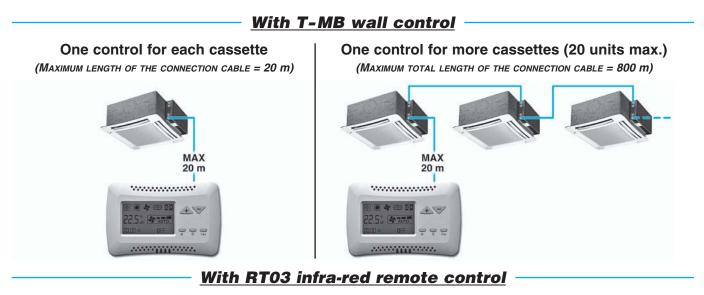

RCS

CODE 9079116

A group of *SkyStar MB* can be connected via a serial link and can consequently be managed at the same time by just one *T-MB* wall control or *RT03* infra-red remote control. Using the special jumper present on the *MB* board, one unit must be configured as the master, and all the others as slaves. It is clear that the remote control must be pointed at the receiver on the master unit. To avoid problems, it is recommended to install and connect the receiver only on the master unit.

One control for each cassette

One control for more cassettes (20 units max.) (MAXIMUM TOTAL LENGTH OF THE CONNECTION CABLE = 800 m)

T2 accessory for units with MB electronic board

The T2 sensor can be combined with MB boards to be placed on the water supply pipe upstream 3 way valves (not to be used with 2 way valve).

The T2 sensor must be used as described below:

- Change-Over for 2-pipe system for the automatic switch of the operating mode.
 If water temperature is lower than 20°C, cooling mode is set; on the other hand, if water temperature exceeds 30°C, heating mode is set.
- It can be used on units with electric heater and hot water supply. The T2 priority probe activates the electric heater or water valve, depending on the water temperature detected. If water temperature exceeds 34°C, the water valve ON-OFF control is activated; on the other hand, if water temperature is lower than 30°C, the electric heater is activated.

PSM-DI multifunction control

DESCRIPTION	Identification	Code
Multifunction control (to be used with SK–MB and SK–ECM–MB version only)	PSM-DI	3021293

Another option available for the serial communication between the units is the possibility to connect up to 60 *Cassette* units in series and manage them with just one wall mounted *PSM-DI* controller. The wall mounted controller can be used to set the operating mode for each individual unit connected, display the operating conditions of each individual unit, and set the ON/OFF time sets for each day of the week (the program can be set for all the units and for a maximum of two groups of units).

If more than 60 units need to be connected, two or more controllers must be used. Each wall mounted controller only manages the units it is connected to.

The **PSM-DI** control is used to manage a series of fan coils, up to a maximum of 60 units (the maximum length of the RS 485

connection cable must not exceed 800 m), from one single control point.

The **PSM-DI** control communicates via a serial line with all the units connected, with the possibility of controlling them all together or individually. In fact, the unique address of each individual fan coil means that all the units can be called at the same time, or the individual unit called, to perform the following functions:

- display the current operating mode, the fan speed, the set point;
- display the room temperature measured on the individual unit;
- turn all the units ON and OFF at the same time or alternatively each unit individually;
- change the operating mode (fan only, heating, cooling, automatic changeover);
- change the set point;
- modify the values and operation parameters of the fan speed.

Each function can then be sent to all the units connected, or alternatively to each individual unit.

Different set points or operating modes can be set for each individual unit.

The **PSM-DI** panel can also be used for the time management of the units over the week. Four ON times and four OFF times can be set on the units for each day of the week. A different Temperature set that will be considered as Operation set for all connected appliances, can be set for each event. If the Temperature set is not entered for the individual event, it must be set during programming for each individual unit or for the entire network.

Units without receiver or with receiver can be connected within the network: the former can receive instructions only from the **PSM-DI** wall mounted panel; while the latter can receive information from both the wall mounted panel (**PSM-DI**) and infra-red remote control. Use the infra-red remote control to force ON mode of the individual unit, if ON/OFF daily time programming has been set. The unit will regain the settings from the **PSM-DI** panel during execution of successive start-up program.

The **PSM-DI** panel cannot be used together with the **Sabianet** management program (see next page).

Note: set the configuration Dip Switches of each fan coil as illustrated in the remote control use manual, based on the required solutions.

Note: the RS 485 network's overall length must not exceed 700/800 metres.

SkyStar / SkyStar ECM ECM

Management system for a network of fan coils

Sabianet program for managing a network of Sabiana MB fan coils

Description	I DENTIFICATION	Code
Hardware/software supervisory system (to be used with SK–MB and SK–ECM–MB version only)	Sabianet	9079118

Sabianet is a centralised control system for networks of Sabiana MB fan coils, based on software that runs on LINUX[™].

The **Sabianet** software offers a practical and economical solution for managing the units, with the simple click of the mouse.

The main characteristics include simplicity of use, an extremely complete and functional weekly program, and the possibility to access the historical operating data for each individual appliance connected.

The program exploits all the potential of our units with remote controls, representing an addition to the latter.

The **Sabianet** program is a control tool that can be used as a replacement for the remote control, or in parallel, however the settings made using **Sabianet** can have priority over those made using the remote control.

The program can be used to:

- Create uniform groups (groups of units on individual floors, in offices or rooms).
- Save weekly programs configured for different types of operation (summer, winter, mid seasons, closing periods etc.); these can then be recalled and activated with a simple click of the mouse. Weekly on/off cycles can be set for individual units or groups of units.
- Set the operating conditions for each individual unit or groups of units (operating mode, fan speed, temperature setting).
- Set the set point limits for each individual unit or groups of units.
- Switch each individual unit or groups of units ON or OFF.

The main program screen can display and interact with the entire network of units. An individual unit, a group of units or the entire network can be called so as to make modifications to the operating mode and the set point. The user can then check the operating status of each individual unit, read the room temperature, the coil temperature and the operating status of the condensate drain pump or any alarms.

Management system for a network of fan coils

Belden 9841, RS-485, 1x2x24 AWG SFTP, 120 Ohm

PSM-DI and Sabianet accessories

Identification	Code
SIOS	3021092

SIOS is a board equipped with 8 relays with potential free contact to control the activation or deactivation of remote electric utilities. Moreover, the board has 8 digital inlets to display the actuators or external consents, such as motor or other. The SIOS boards can be connected:

- inside a network managed by Sabianet;
- to a PSM-DI panel (one SIOS for each PSM-DI panel).

IDENTIFICATION	Code
Router-S	3021290

The Router-S is an electronic board that:

- allows creating networks with more than 60 units (minimum 2 Router-S are required) or to divide the network (per floor, building, etc.);
- it allows creating a Master/Slave sub-network
- to be controlled as an indipendent group.

The Router-S can be used only inside a network managed by Sabianet.

The number of Router-S to be used is: - up to 60 units: no Router-S

- from 61 to 120 units: 2 Router-S
- every 60 subsequent units: 1 additional Router-S

Introduction

The MCT version has been designed for all environments where false ceilings are not featured or cannot be constructed.

The cover cabinet fits perfectly to the air intake and outlet diffuser, maintaining the appealing design that defines the SkyStar series. The water fittings can be turned to point upwards.

The MCT series includes 7 models, with an installation height of up to 5 m, thanks to the highly flexible adjustment of the air distribution louvers.

All the technical specifications described on the previous pages remain the same, while keeping in mind that:

- the MCT series features one coil only (two pipe systems)
- there is no possibility of fresh air intake
- there is no possibility of additional electric heater

The MCT version features a special casing delivered in separate packaging; this must only be fitted after having installed the SkyStar unit and completed the water and electrical connections.

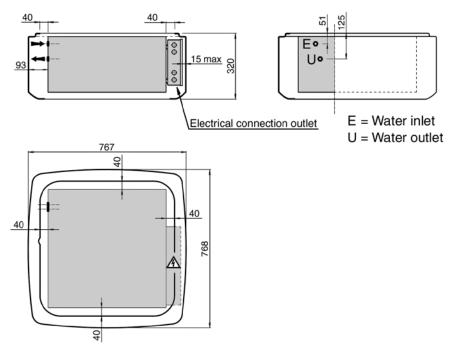

Dimensions and Weights

SK 02-MCT / SK 12-MCT / SK 22-MCT / SK 32-MCT

Casing code: 9079240

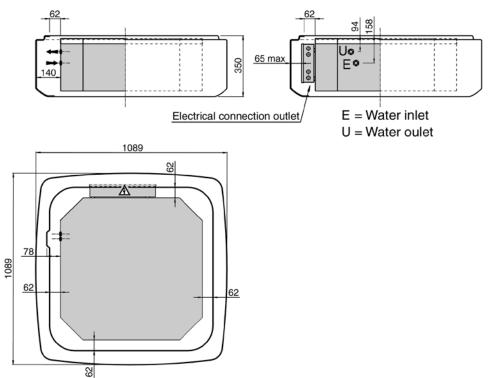

Casing weight: 5 kg (7,5 kg with the packaging)

SK 42-MCT / SK 52-MCT / SK 62-MCT

Casing code: 9079250

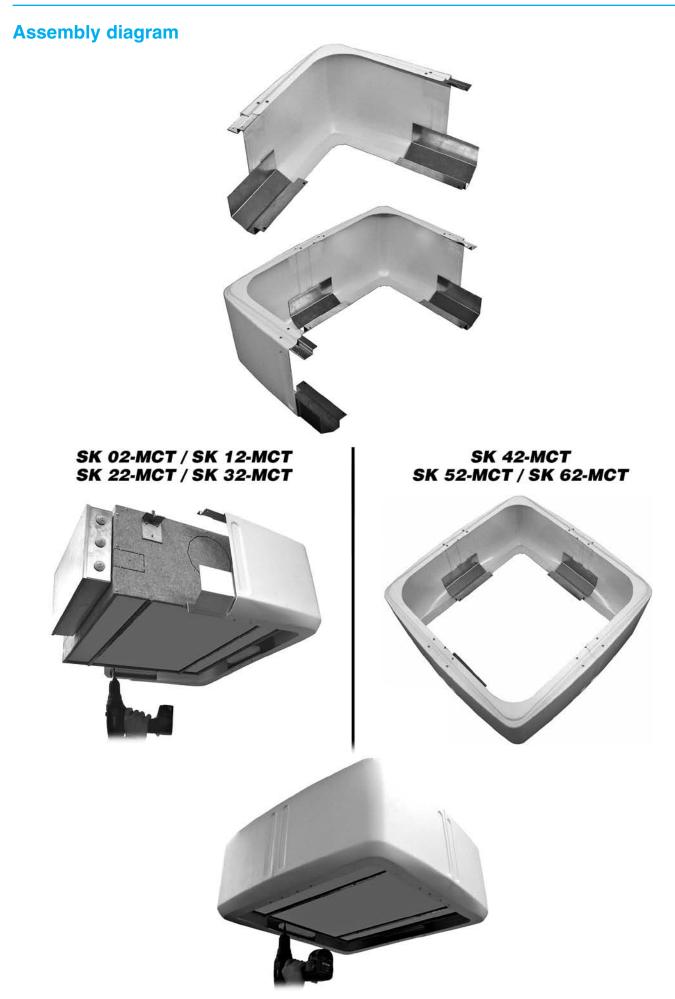

Casing weight: 10,5 kg (13,5 kg with the packaging)

Warning: the electrical and water connections must enter the unit from above and must not interfere with the casing.

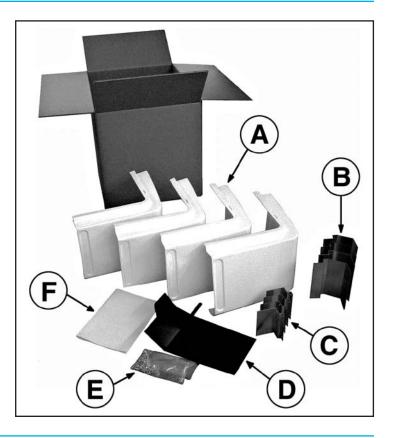

Components of the casing:

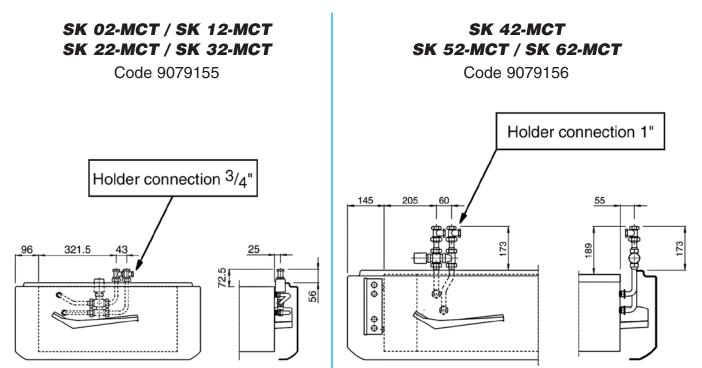

The casing includes:

- A 4 corner covers
- **B** 4 bottom brackets
- C 4 top brackets
- D Condensate collection tray
- E Hardware (45 3.9x9.5mm TCX screws)
- F Instruction sheet

Valve kit

The valve fittings allow the water pipes to be connected from above.

For the specifications of the valves, see page 15.

The descriptions and illustrations provided in this publication are not binding: Sabiana reserves the right, whilst maintaining the essential characteristics of the types described and illustrated, to make, at any time, without the requirement to promptly update this piece of literature, any changes that it considers useful for the purpose of improvement or for any other manufacturing or commercial requirements.
