EVI tehnologija

EVI technology

EVI je skraćenica za "Enhanced Vapor Injection" i predstavlja tehnologiju koja se koristi na našim niskotemperaturnim toplotnim pumpama za postizanje većih performansi na nižim temperaturama do -25°C. Sa EVI tehnologijom i inverterskim kompresorom, Mikoterm toplotne pumpe mogu da rade stabilno i da ostvare visoku efikasnost.

EVI stands for "Enhanced Vapor Injection" and is a technology used on our low-temperature heat pumps to achieve higher performance at lower temperatures as down as -25°C. With EVI technology and inverter compressor, the Mikoterm heat pumps can work stably and achieve high efficiency.

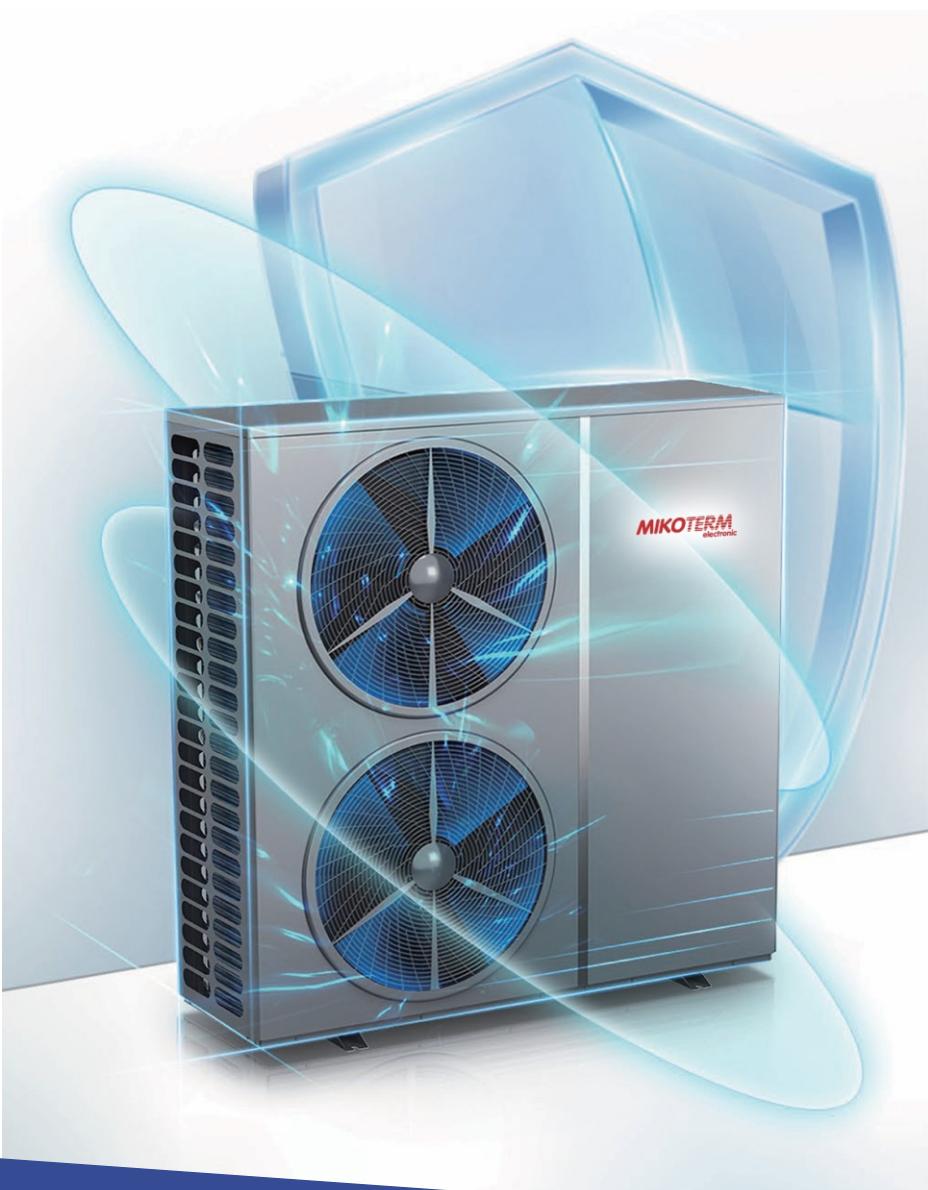

Zagaranovana bezbednost

Guaranteed Safety

Rashladno sredstvo R32 se smatra ekološki prihvatljivim, ali nepravilno rukovanje i skladištenje mogu dovesti do potencijalnih bezbednosnih problema. Sve ovo se može izbegti korišćenjem Mikoterm toplotne pumpe R32 DC inverter, jer su dizajnirane sa sigurnosnim merama koje garantuju bezbednost.

The refrigerant R32 is considered to be environmentally friendly, but improper handling and storage might lead to potential safety issues. All of this can be avoided by using the Mikoterm heat pump R32 DC inverter since they are designed with safety measures to guarantee security.

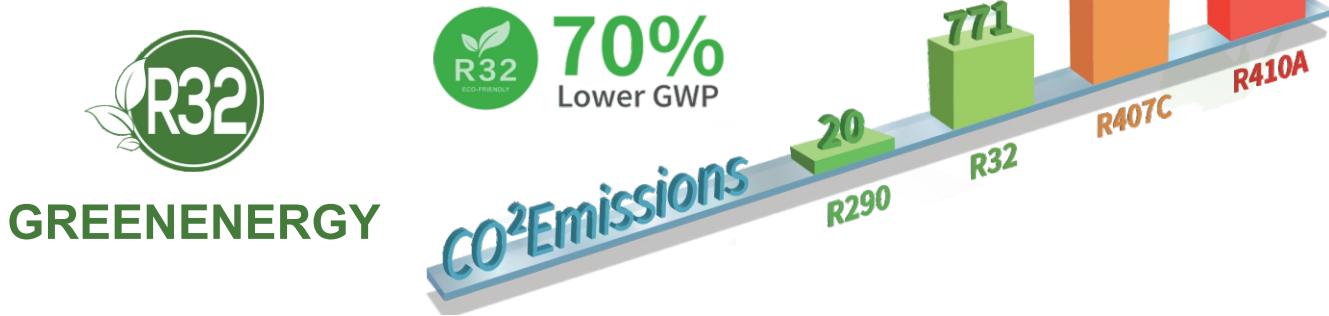

R32 sa niskim GWP

R32 Low GWP Refrigerant

U poređenju sa rashladnim sredstvima koja se danas široko koriste, kao što su R-410A i R407C, R32 ima mnogo manji potencijal globalnog zagrevanja, što utiče na očuvanje životne sredine.

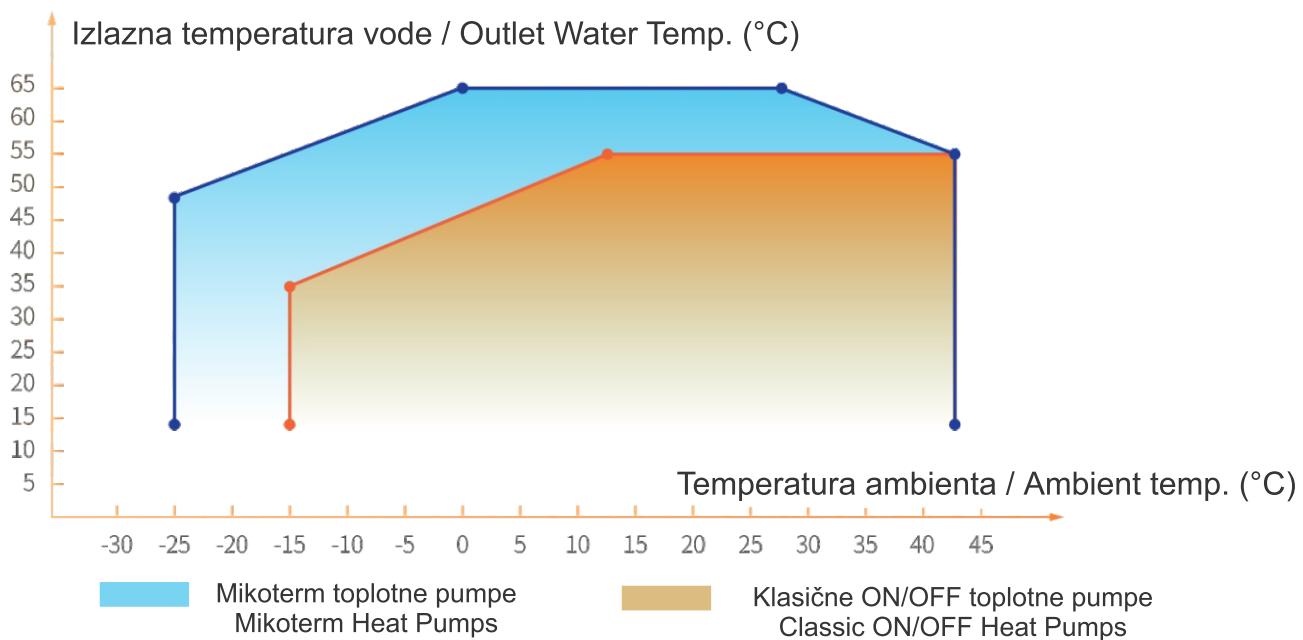

Compared to the refrigerant widely used today, such as R-410A and R407C, R32 have much lower global warming potential, which affects the preservation of the environment.

Širi opseg rada Wider Running Range

Zahvaljujući inverteru i EVI tehnologiji, Mikoterm toplotne pumpe imaju širok raspon radnih temperatura za grejanje, hlađenje i toplu vodu za domaćinstvo. Može da dostigne visoku temperaturu vode u hladnom okruženju i stabilno radi na temperaturama okoline do -25°C.

Thanks to the inverter and EVI technology, the Mikoterm Heat Pumps features a wide operating temperature range to provide space heating, cooling, and domestic hot water. It can reach the high water temperature in a cold climate and work stably at ambient temperatures as low -25°C.

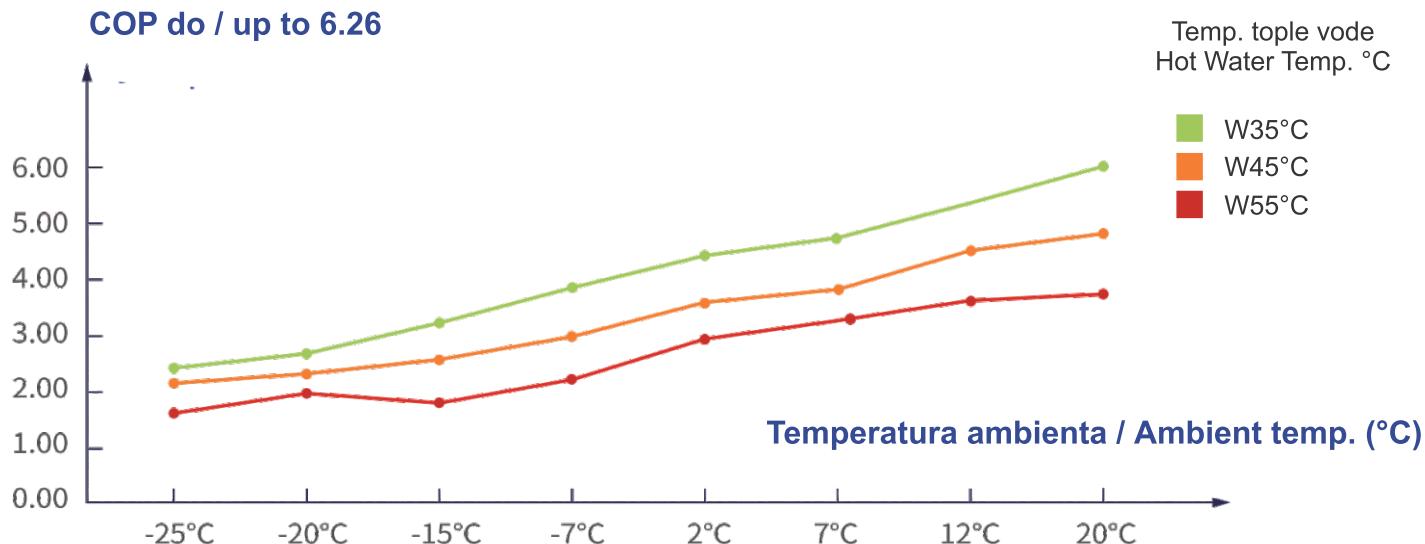

Povećana efikasnost Increased efficiency

Sa maksimalnim COP-om od 6.26 i ErP ocenom A++, Mikoterm EVI DC inverterska toplotna pumpa troši manje energije i stoga pomaže potrošačima da smanje račune za grejanje.

With a maximum COP of 6.26 and an ErP rating of A++, the Mikoterm EVI DC inverter heat pump consumes less energy and therefore helps consumers reduce heating bills.

COP do / up to 6.26

IoT Funkcija IoT Function

Upravljaljte svojom pumpom preko Eco-Home aplikacije
Control your pump via the Eco-Home app

Uz pomoć IoT funkcije, korisnici kontrolišu toplotnu pumpu bilo gde i bilo kada.

With IoT function, the users control the heat pump anywhere and anytime.

Kontrolišite sve jedinice preko e-home aplikacije

Controlling all units from E-home

Potpuna DC inverter tehnologija

Full DC Inverter technology

Mikoterm topotna pumpa kombinuje potpuni DC inverter sa dvostrukim rotacionim kompresorom sa inverterskim motorom bez četkica, tako da jedinica može automatski da cilja temperaturu, kako bi korisnicima pružila maksimalnu udobnost uz najniže troškove.

The Mikoterm heat pump combines a full DC inverter twin-rotary compressor with an inverter brushless motor, so the unit can target temperature automatically, to bring users maximum comfort at the lowest costs.

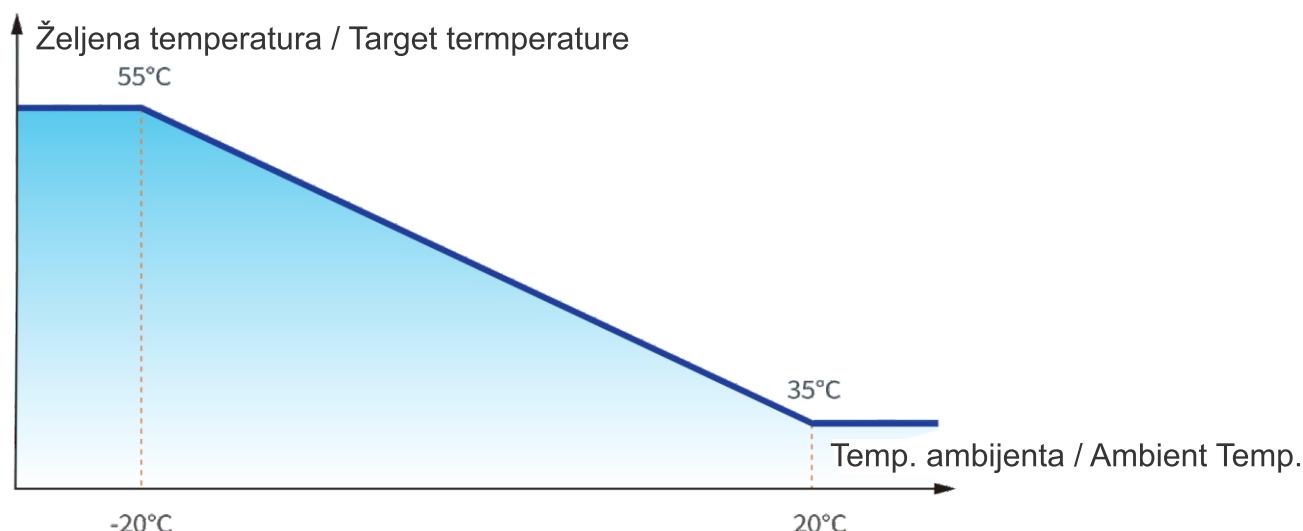

Inteligentno podešavanje temp. vode

Intelligent Water Temp. Adjustment

Jedinstvena logika upravljanja omogućava Mikoterm topotnim pumpama da inteligentno podeše temperaturu izlazne vode, u skladu sa temperaturom okoline u realnom vremenu. Zbog toga topotna pumpa može da greje, hlađi i obezbeđuje toplu vodu za domaćinstvo na konstantnoj temperaturi.

The unique control logic enables Mikoterm to adjust the outlet water temperature intelligently, according to the real-time ambient temperature. Therefore, the heat pump can deliver, cooling, and domestic hot water at a constant temperature.

The Mikoterm heat pump combines a full DC inverter twin-rotary compressor with an inverter brushless motor, so the unit can target temperature automatically, to bring users maximum comfort at the lowest costs.

Nizak nivo buke Low Noise

Pored DC invertera bez četkica, Mikoterm EVI toplotna pumpa koristi pojačane mere smanjenja zvuka kao što je dvostruka apsorpcija udara kompresora poznatog brenda. Nivoi zvuka počinju od 42 dB(A), što ga čini najtišim sistemom u liniji DC inverteera.

In addition to brushless DC inverter, the Mikoterm EVI heat pump adopts reinforced sound reduction measures such as the dual shock absorption by the famous-brand compressor. The sound levels start as low as 42dB(A), making itself the quietest system in DC inverter lineup.

VENTILATOR SA DC MOTOROM

Motor ventilatora bez četkica obezbeđuje visoku efikasnost i nizak nivo buke

FAN WITH A DC MOTOR

Brushless fan motor provides high efficiency and low noise level

SPECIJALNI SLOJ ZAŠTITE POVRŠINA

Omogućava brzo i pravilno odmrzavanje

HYDROPHILIC STEAMER SURFACE

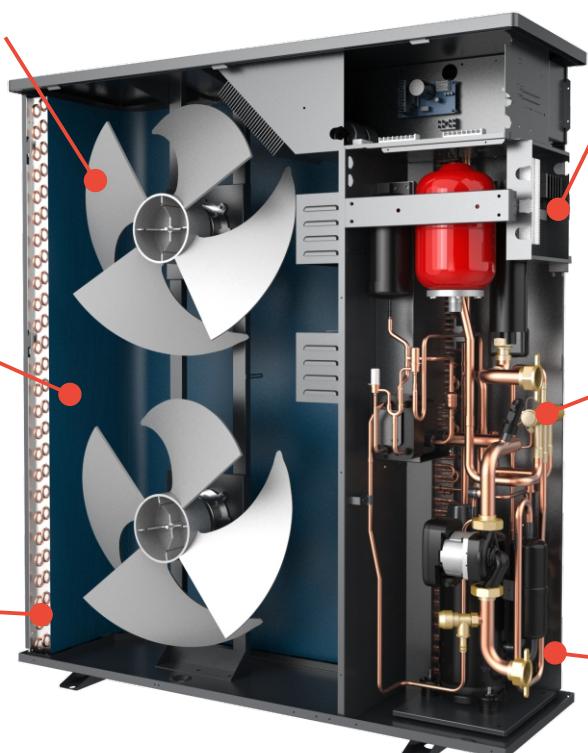

Provides quick and correct defrosting

UNUTRAŠNJE SPIRALNO OREBRENJE CEVI

Značajno povećava efikasnost grejanja

RIBBED STEAMER PIPESWITH A SPIRAL INNER STRUCTURE

Considerably increases heating efficiency

INTEGRISANI TERMINALNI BLOK

Obezbeđuje brzo povezivanje kablova za napajanje

INTEGRATED TERMINAL BLOCK

Assures quick connection of supply cords

UGRAĐEN ELEKTRIČNI GREJAČ

Pruža podršku i zaštitu od ekstremno niskih temperatura

BUILT-IN ELECTRIC HEATER

Provides support and protection from extremely low temperatures

PAMUČNA ZAŠTITNA MREŽICA

Dodatno smanjenje buke pri radu

COTTON RIVETIVE MESH

Additional reduction of operation noise
